Risk Disclosure

Star Bridge Capital Global Group LLC

December 2025

SBCFX is the business name of Star Bridge Capital Global Group LLC (referred to as "the Company", "us", "we", "our", or "ourselves" as applicable). The Company is authorized and regulated by the Financial Services Authority of St. Vincent and the Grenadines under registration number 4343 LLC 2025. It is registered in St. Vincent and the Grenadines, with its office located at Griffith Corporate Centre, Beachmont, Kingstown, St. Vincent and the Grenadines, P.O. Box 1510.

Important Risk Disclosure

This notice is provided to you in compliance with the requirements of Saint Vincent and the Grenadines (SVG) as you are proposing to undertake dealings in financial instruments in the form of Contracts for Difference (CFDs) or Forex with a firm engaged in investment business. This notice cannot and does not disclose or explain all of the risks and other significant aspects involved in dealing in such products.

We do not provide advice relating to investments or possible transactions in investments, nor do we give investment recommendations of any kind. We can provide factual market information or, in response to your enquiry, information about transaction procedures, potential risks involved, and how those risks may be minimized.

Definition of a Contract for Difference

A Contract for Difference (CFD) is a leveraged contract entered into with SBCFX on a bilateral basis. It enables an investor to speculate on or hedge against rising or falling prices in an underlying asset through online trading platforms, as well as to hedge against future adverse market movements. An investor may choose to buy (go "long") the CFD to benefit from an increase in the underlying asset's price, or to sell (go "short") the CFD to benefit from a price decrease. The price of the CFD is derived from the price of the underlying asset, which may be a current ("spot") price or a forward ("future") price. For example, if an investor is long a SBCFX CFD and the underlying index price rises, the value of the CFD increases—at contract closure, SBCFX will pay the difference between the closing value and the opening value. Conversely, if the investor is long and the underlying index price falls, the CFD value decreases—the investor will pay SBCFX the difference upon closure. The leverage inherent in all CFDs magnifies both profits and losses.

General Risk Warning

Engaging in CFD or Forex transactions (referred to collectively as "Transactions" in this notice) carries a high degree of risk to your capital. You should not engage in this form of investing unless you fully understand the nature of the Transaction you are entering into and the true extent of your exposure to loss. Your profit or loss will vary according to the extent of the fluctuation in the price of the underlying markets on which your Transaction is based.

For many members of the public, these Transactions are not suitable. You should therefore carefully consider whether they are suitable for you in light of your personal circumstances, financial resources, and investment objectives. In considering whether to engage in this form of investing, you should be aware of the following:

1. Effect of Leverage

A high degree of "leverage" or "gearing" (i.e., the small amount of funds required upfront relative to the size of the trade you can place) is characteristic of this type of Transaction. Consequently, a relatively small movement in the underlying market can have a disproportionately large effect on your Transaction. While a favorable market movement may produce significant profits, an equally small adverse movement may result in the loss of your entire deposit as a retail client. If you are a professional client, an adverse market movement may not only result in a loss but may also expose you to substantial additional losses; in particular, your losses may exceed your initial deposit, and no deposit or other amount paid by you will serve as a limit on your liability. By deciding to trade in Margined Forex or CFDs, you accept this level of risk.

You may be required to deposit substantial additional margin at short notice to maintain your open position(s). If you fail to provide such additional funds within the required time, your position(s) may be liquidated at a loss and you will be liable for any resulting deficit. If you are in any doubt about our products, you should seek independent professional advice.

2. Margined Forex and CFDs

The purpose of a Margined Forex or CFD Transaction is to secure a profit or avoid a loss by reference to fluctuations in the price of an underlying asset or index (the "Underlying Market"). In the context of our activities, the Underlying Market may be a securities index, an exchange rate between two currencies, CFDs on gold, silver, oil, or such other investments as we may agree in writing from time to time. It is an express term of each CFD or Forex Transaction that neither you nor we:

a) acquire any interest in, or right to acquire, and are not obliged to sell, purchase, hold, deliver, or receive the Underlying Market; and

b) the principal rights and obligations of each party under the CFD or Forex Transaction are to make and receive the relevant payments.

3. Off-Exchange Transactions

Transactions with SBCFX are not conducted on a recognized or designated investment exchange and, accordingly, may expose you to greater risks than exchange-traded transactions. The structure and rules of Transactions are determined solely by SBCFX in accordance with SVG conduct of business rules. For example, if you wish to close a position, you must do so at SBCFX's quoted price, which may be at a premium or discount to the Underlying Market. When the Underlying Market is closed, SBCFX's quotes may be influenced by the volume of other clients' buying or selling with SBCFX. For instance, the spread may widen significantly. You can only close any position with the same provider (i.e., SBCFX) with whom it was originally opened.

When entering into such Transactions, unless an exemption applies, SBCFX will do so under a two-way client agreement (i.e., SBCFX's terms of business and documents incorporated by reference). You should satisfy yourself that all dealings are conducted in strict conformity with the client agreement.

4. Margin Requirements

We reserve the right to adjust margin requirements for any product we offer. This may result in an increase in your margin requirement, and you may therefore be required to deposit additional funds to maintain existing positions.

5. Monitoring of Positions

It is your responsibility to monitor your account. Should the net value of the account (cash plus running profits minus running losses) fall below the required margin, we may close some or all of your trades at the prevailing market price. This should not, however, be taken as a guarantee, and you are responsible for ensuring that sufficient funds are always maintained in your account.

6. Market Risks

Margined Forex and CFD trading depend on the price movements of underlying financial products. You are therefore exposed to risks similar to, but magnified compared with, holding the underlying assets directly. In some circumstances, the risks may be greater.

Placing a stop-loss order may limit your loss, but this is not guaranteed, as your losses could be larger under certain conditions. Slippage occurs when a stop-loss order is executed at a price different from the specified order price. This can happen when the Underlying Market becomes unusually volatile, potentially rendering the stop-loss ineffective, in which case your position will be closed at the prevailing SBCFX price.

Gapping refers to a significant jump in a market price, resulting in your stop-loss order being missed and your trade being closed at a much higher or lower price than intended. Accordingly, if you hold an open position in a volatile market environment, you must understand the potential impact of such events, as your order may be filled at the next available SBCFX price.

Under certain trading conditions, it may be difficult or impossible to liquidate a position. This could occur, for example, during periods of rapid price movement if prices rise or fall to such an extent within a single trading session that trading is restricted or suspended.

At market opening and closing times and before major announcements, the market spread may widen substantially. You must therefore ensure that your account holds sufficient funds to cover this eventuality.

If you trade a product denominated in a currency different from your account's base currency, fluctuations in the exchange rate will affect your potential profit or loss.

7. Credit

No credit is extended to you by us. Neither a variation margin credit allocation nor an initial margin credit allocation constitutes a credit facility.

8. Counterparty Risk

We act as the counterparty to all your trades. None of our products are listed on an exchange, and no rights, benefits, or obligations under these Transactions are transferable to any third party. While we undertake to provide you with best execution and to act reasonably in accordance with our published terms of business, any Margined Forex or CFD positions opened with us must be closed with us, based on our prices and subject to the terms and conditions agreed with you.

9. Taxation

You bear the risk that your trades and any related profits may be or become subject to taxation. You are responsible for all taxes and stamp duties applicable to your trades. We do not provide tax advice to clients, and you are responsible for your own tax affairs. If you are in any doubt regarding your tax obligations, you should seek independent advice.

10. Commissions, Spreads and Other Costs

You should obtain details of all commissions and other charges for which you will be liable before trading with SBCFX. If charges are not expressed in monetary terms (e.g., bid-offer spreads), you should obtain a clear explanation of what such charges are likely to represent in specific monetary terms. When commission is charged as a percentage (as with futures, for example), it is normally calculated as a percentage of the total contract value, not merely as a percentage of your initial payment.

Certain types of trades may require you to pay financing costs. Trades in currencies other than your base currency may require conversion of those foreign currencies into your base currency. The combination of overnight financing costs and foreign exchange costs may exceed any profits on your trades or increase any losses incurred.
